The development plan of the DAIA

DAIA - Digital Artificial Intellignece Agent
DVAI - Digital Vision Artificial Intellignece

Test the DAIA on a much larger scale (privetly), and on a new demo

We can use the DAIA for our own purposes and or make it as a open-source project, or make it as a commercial product

Add super capabilities to the DAIA (self-optimization, auto agent duplication, auto networking capabilities)

OR

Test the new DAIA version with a new demo

First mini demo for DAIA

Improve the DAIA and add more features (Memory, Auto-evaluation(self fixing)...)

1.

Develop the DAIA using the new APIs

Prepare (start re-designing a better DAIA blueprint more inspired by AutoGPT) for the new GPT with Vision API from the OpenAI event
